

Web Imposer

Un flujo de trabajo • Una interfaz • Una solución

Smart Work Flow

Powerful, unified workflow designed to meet the production needs of newspapers and web printers. Affordable and expandable, Web Imposer has versions and features for small weeklies, as well as enterprise implementations powerful enough to consolidate production for the nation's largest newspaper group. Web Imposer is newspaper workflow where work truly flows.

Efficiency. Precision. Productivity

We understand that tight deadlines require a smooth, functional and easy to use workflow, focused on efficiency, and we created WebPaier for just that environment. We also know that fast isn't good if it's wrong. So, WebPaier locates and corrects file problems before they become your problems.

Beyond Workflow. Intelligent Automation.

Web Imposer is an intelligent prepress and production management and automation system built around News Hub media's own native PDF processing engine. It covers the gamut from file acquisition, to file delivery and output control.

Being said.....

When it came time to upgrade our workflow software, we were committed to finding a product that could keep up with our rapid growth provided by a company that would be around to support that product. We looked at a large number of programs, but in the end the choice was clear. [NHM] offered us the automated processes, clean look and long term security we were looking for at a very competitive price."

Byron Wooten

IT Manager, The Villages Media Group
publishers of The Villages Daily Sun

Key Features:

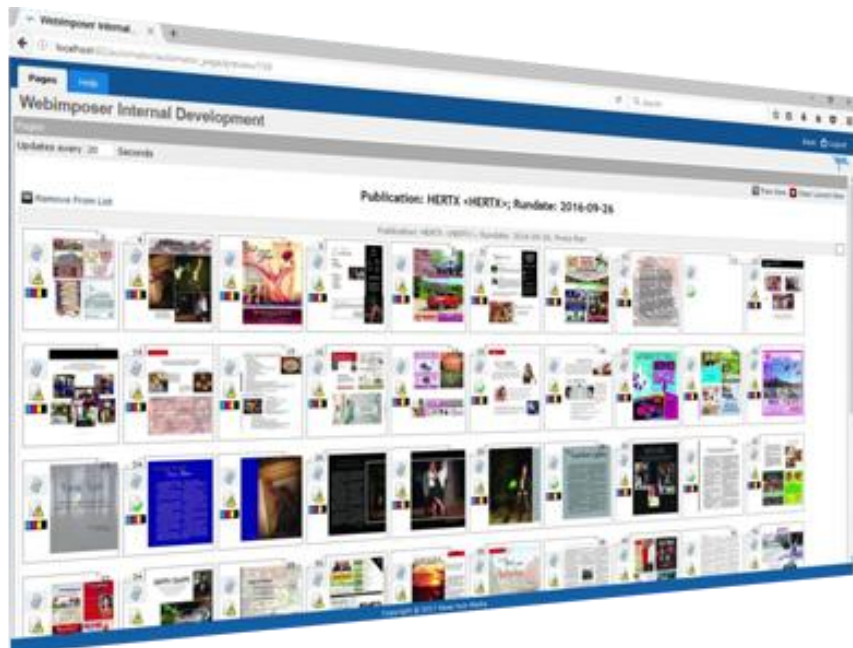

Getting files into the system

File acquisition:

Web Imposer can be configured to watch hot-folders and FTP sites for incoming files

Browser based user Interface

Automated Page Pairing/Imposition

Web Imposer includes all pairing/imposition formats: 1-up, 2-up Broadsheet, 4-up Tabloid, 3 and 6-up Tri-liner, 8-up Quarterfold / Mini, 16-up Large Format. It also handles all newspaper special needs like doubletrucks, dinkies, quarter / half / three-quarter, webs, web-growth / fan-out, creep and wraps

Pairing is problem free because, as soon as a file arrives, Web Imposer performs automatic page size verification and resizing.
